REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed towards a method and apparatus of generating a data structure representing a finite state machine in a computer memory. The closest prior art, Alphas (USPN 6,708,327 B1), shows a similar system, in which, a system for facilitating the access by an end user to a component to be tested via a global computer network comprising an interface for enabling an end user to access a central computer network in communication with a component to be tested, said component to be tested residing on a second computer, means for interfacing the central computer network with the component to be tested on the second computer, means for enabling the end user to test the component to be tested on the second computer via the interface means and the central computer network, and means for transferring a result executed by the component on the second computer through the central computer network and to the end user. However, Alphas fails to address: "for generating a first encoding corresponding to a first state

of an abstract state machine, the encoding generated from an evaluation of non-trivial guard conditions of the abstract state machine and when the first encoding is not the same as any encoding already associated with a state of the finite state machine, including data associating the first encoding with the first state in the data structure representing the finite state machine". These distinct features have been added to all independent claims and render them allowable.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
